

## Solar Field Service Technician Netherlands

The Solar Field Service Technician will provide service, maintenance, technical support and commissioning for Solar installed photovoltaic plants, inverters and monitoring. In this position, you will be responsible for servicing customers located in Netherlands and Belgium

### Responsibilities

- Perform field service to ensure 99% up time.
- Diagnose and repair faulted inverters.
- Troubleshoot issues with mechanical and electromechanical.
- Conduct annual periodic maintenance inspections.
- Keep maintenance records of findings.
- Assist with developing maintenance programs.
- Perform start-up and commissioning for new PV inverter installations.
- Inspect physical installation (wiring, connections and mechanical condition).
- Power up, set all required parameters and ensure proper operation.
- Monitor performance and efficiency levels.
- Maintain high customer satisfaction levels by providing excellent customer service.
- Provide accurate and timely product service reports.

### Requirements & Skills

- Must be customer oriented with professional demeanour.
- Frequent travel to and from customer locations – daily/monthly.
- Must have knowledge of Modbus serial and Ethernet communications.
- 2 year technical degree and 2-5 years industry work experience with inverters is a plus but not necessary.
- Great interpersonal, oral and written skills are required.
- Requires analytical and quantitative skills
